PROFESSIONAL SUMMARY

Results-driven Backend Engineer specializing in scalable server-side architecture, secure API development, and database optimization. Proficient in engineering robust software ecosystems using Node.js, Express.js, and MongoDB. Demonstrated success building production-ready financial technology solutions, implementing rigorous JWT-based authentication workflows, and optimizing database schemas. Equipped with a solid foundation in software engineering principles from SQI College of ICT and upcoming experience in Artificial Intelligence engineering, positioning me to deliver immediate value across high performance web applications and intelligent technical opportunities.

TECHNICAL SKILLS

Backend Dev: Node.js, Express.js, RESTful APIs, MVC Architecture, Authentication & Authorization, JWT, Middleware Systems

Databases: MongoDB, Mongoose ODM, Relational/Non-Relational Modeling, Data Validation, Query Optimization

Frontend & Core: React.js, JavaScript (ES6+), HTML5, CSS3, Component-Driven UI Architectures **Tools & Cloud:** Git, GitHub, Postman API Testing, Render, Vercel, Resend, Environment Architecture, CI/CD Deployments

PROFESSIONAL EXPERIENCE

FlyRank *Incoming July 2026 Artificial Intelligence Intern*

- Selected for an intensive AI engineering internship focusing on the integration of backend systems with predictive models and data pipelines.
- Prepared to collaborate on refining enterprise backend workflows, building scalable APIs, and optimizing data retrieval for machine learning features.

Independent Software Developer *June 2025 – Present Backend Engineer / Freelance Projects*

- Architect and execute scalable server-side systems utilizing Node.js and Express.js, improving application reliability and API response efficiency.
 - Engineer secure authentication and authorization workflows via JSON Web Tokens (JWT) and granular role-based access controls (RBAC).
 - Design, optimize, and manage highly resilient MongoDB schemas using Mongoose ODM, utilizing proper data validation and indexing techniques.
- Implement core transaction features including automated OTP verification, dynamic password resets, and automated
- transactional email via Resend.
 - Deploy, monitor, and host client and personal production web applications utilizing modern cloud platforms including Render and Vercel.
 - Conduct rigorous end-to-end API testing and performance benchmarking using Postman to eliminate structural system vulnerabilities.

FEATURED PROJECTS

Spring Financial Bank (SFB) – FinTech Backend Infrastructure *Node.js, Express, MongoDB, JWT, Resend* •

Engineered a high-security banking infrastructure supporting user registration, account provisioning, multi-tier authentication, and transactions.

Formulated an immutable ledger/audit logging and secure event notification framework to capture critical operational

- histories seamlessly.
- Mitigated fraud risks by embedding an automated, time-restricted OTP verification service directly into the user onboarding workflow.

Personal Portfolio Platform & Integrations *React.js, Node.js, Express, GitHub API, Vercel* •

Developed a responsive, modern portfolio system utilizing React.js, integrating the external GitHub REST API to mirror live code metrics.

- Configured a server-side automated contact portal with transactional mail layers to handle asynchronous user messages with zero downtime.

Full-Stack E-Commerce Platform *React.js, Node.js, Express.js, MongoDB*

- Built an e-commerce ecosystem consisting of an administrative product manager, reactive state-managed shopping cart, and backend API routing.

EDUCATION & QUALIFICATIONS

SQI College of ICT *Graduated Professional Diploma in Software Engineering*

Relevant Coursework: Backend Systems, Database Design & Modeling, Full-Stack Web Development, Software Engineering Principles, Advanced RESTful API Architectures
